

Active Directory Home Lab

Proof of Completion — Portfolio Project

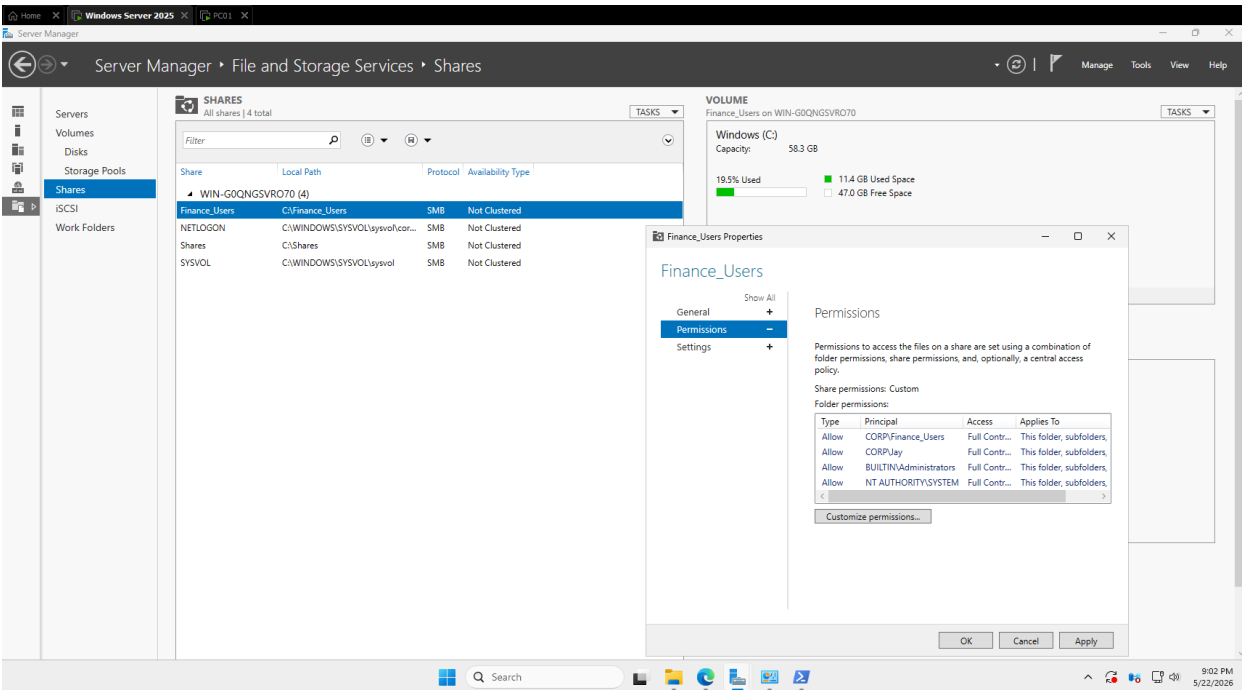

Environment: VMware · Windows Server 2025 · Windows 11 Client (PC01)

Domain: corp.local · Domain Controller: WIN-G0QNGSVR070

Completed: May 22, 2026

1. Shared Folders & NTFS Permissions

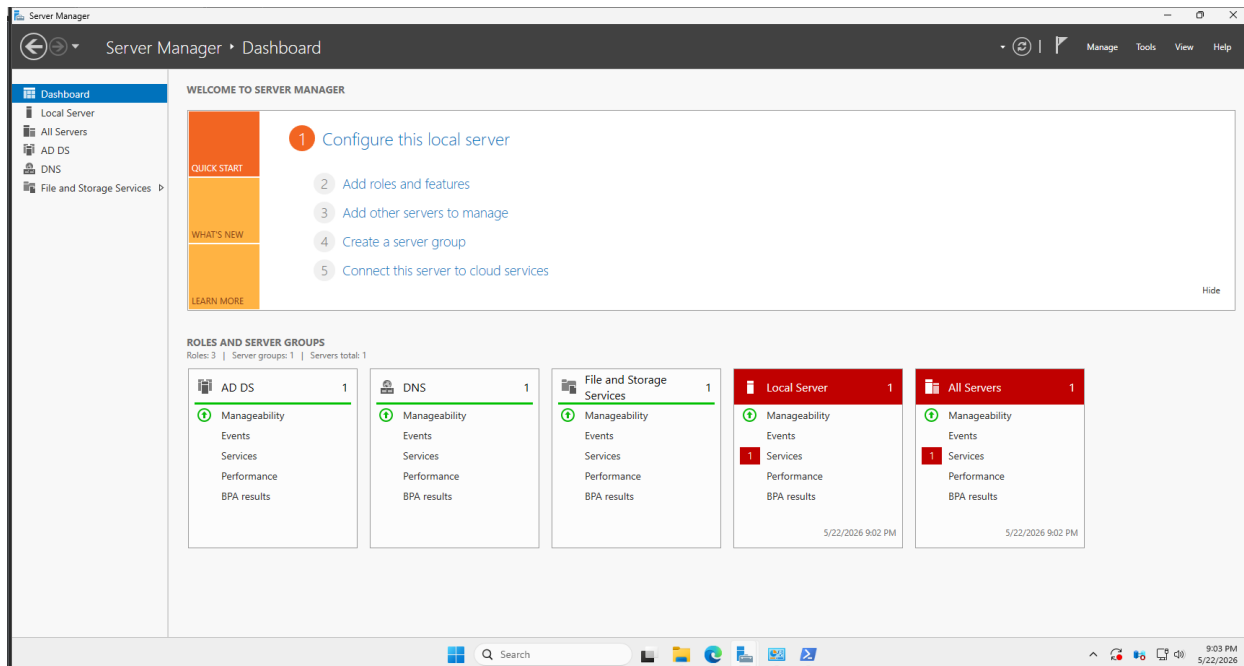

Configured departmental shared folders via Server Manager > File and Storage Services. The Finance_Users share is shown with custom NTFS permissions, granting Full Control to CORP\Finance_Users and CORP\jay while restricting access to other departments.

Finance_Users share properties — NTFS permissions showing CORP\Finance_Users with Full Control

2. Server Manager — Roles Installed

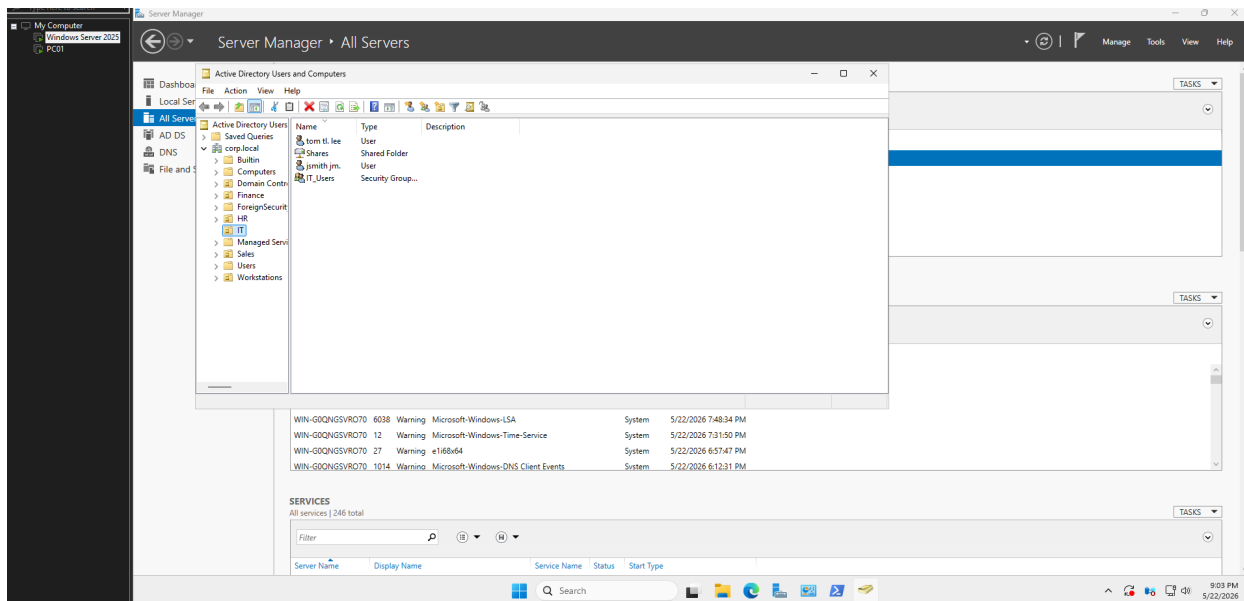

Windows Server 2025 domain controller with three roles successfully installed and showing green Manageability status: Active Directory Domain Services (AD DS), DNS, and File and Storage Services.

Server Manager dashboard — AD DS, DNS, and File and Storage Services all online

3. Active Directory Users & Computers — OU Structure

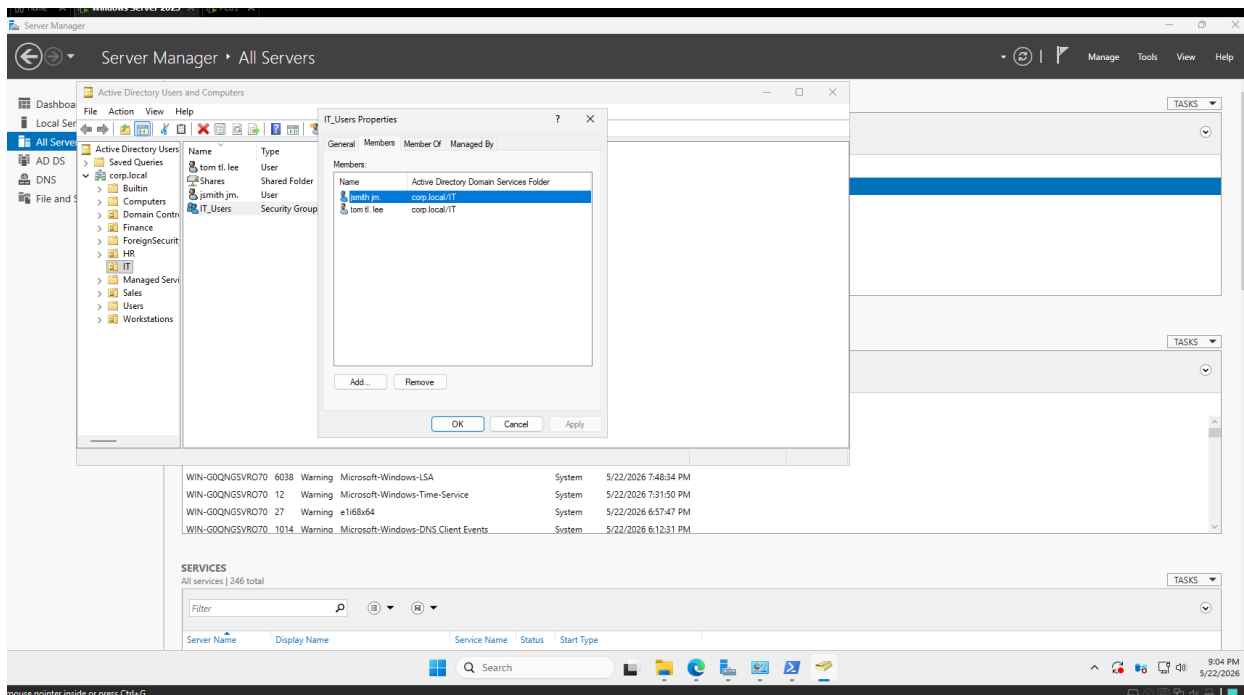

Created Organizational Units mirroring the NorthStar Solutions department structure: Finance, HR, IT, Sales, and Workstations under corp.local. The IT OU contains users jsmith.jm and tom.tl.lee, a shared folder object, and the IT_Users security group.

Active Directory Users and Computers — corp.local OU tree with IT OU contents visible

4. Security Group — IT_Users Membership

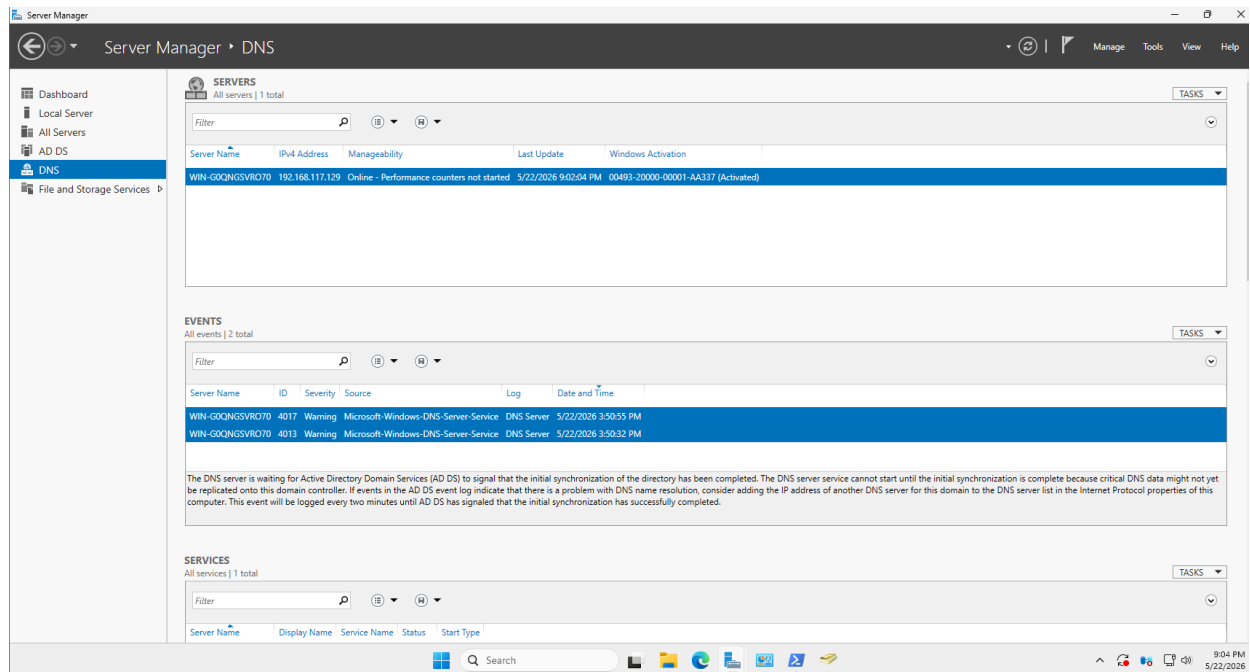

Created department-scoped Global Security Groups and populated them with domain users. IT_Users contains jsmith.jm and tom.tl.lee, both sourced from the corp.local/IT organizational unit.

IT_Users security group properties — Members tab showing jsmith.jm and tom.tl.lee

5. DNS Server — Configured & Online

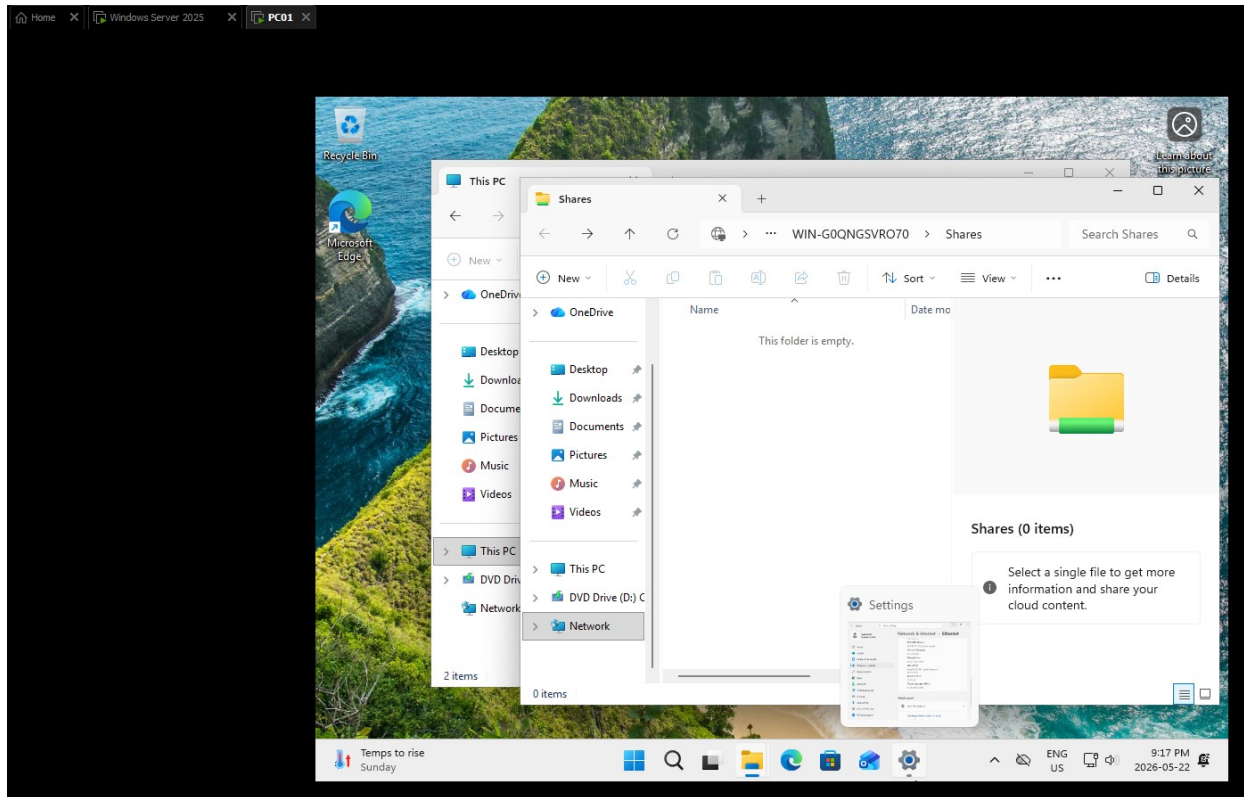

DNS Server role installed on the domain controller at IP 192.168.117.129. Server is online with Windows Activation confirmed. DNS is integrated with AD DS to support domain name resolution for corp.local.

Server Manager > DNS — WIN-G0QNGSVRO70 online at 192.168.117.129

6. Windows 11 Client (PC01) — Domain-Joined & Share Access

Windows 11 client PC01 successfully joined to corp.local domain. File Explorer shows the mapped network share path \\WIN-G0QNGSVRO70\Shares browsed from the client machine, confirming end-to-end domain connectivity and share access.

PC01 (Windows 11 client) — browsing network share \\WIN-G0QNGSVRO70\Shares after domain join

Skills Demonstrated

- Windows Server 2025 installation and configuration
- Active Directory Domain Services (AD DS) setup and domain controller promotion
- DNS Server role installation and AD-integrated configuration
- Organizational Unit (OU) design mirroring departmental structure
- Domain user account creation and management
- Security Group creation (Global scope) and user membership assignment
- Shared folder creation with custom NTFS permission assignments
- Windows 11 client domain join and network share access verification
